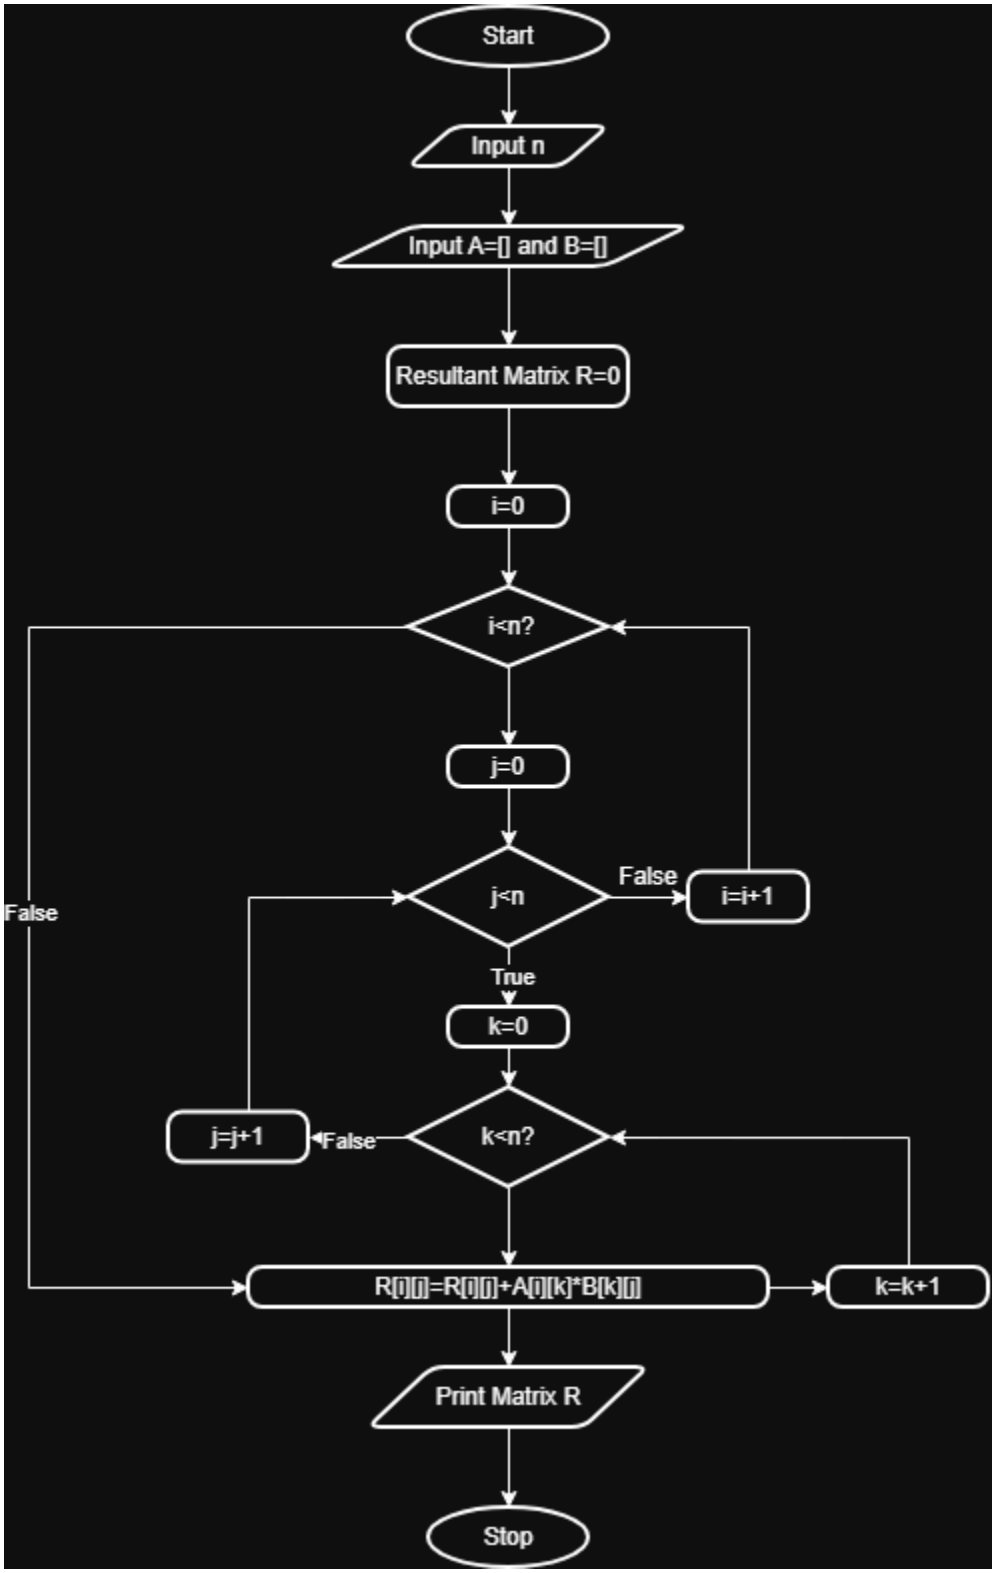
Problem Statement

Write a Python program to perform the multiplication of two square matrices. The program should take two matrices as input and output their product.

Algorithm

1. Start
2. Input the order *n* of the square matrices
3. Input elements of Matrix *A* and Matrix *B*
4. Create a result matrix *R* of size $n \times n$ and initialize all elements to 0
5. Initialize loop variable *i* from 0 to $n - 1$
6. Inside that, initialize loop variable *j* from 0 to $n - 1$
7. Inside that, initialize loop variable *k* from 0 to $n - 1$
8. Perform multiplication and addition:
   R[i][j]=R[i][j]+A[i][k]×B[k][j]R[i][j] = R[i][j] + A[i][k] \times B[k][j]R[i][j]=R[i][j]+A[i][k]×B[k][j]
9. Repeat until all loops finish
10. Print the result matrix *R*
11. Stop

Flowchart



Start
Input n
Input A=[] and B=[]
Resultant Matrix R=0
i=0
i<n?
j=0
j<n
False
i=i+1
True
k=0
k<n?
j=j+1
False
R[i][j]=R[i][j]+A[i][k]*B[k][j]
k=k+1
Print Matrix R
Stop
False

8.1.1. Multiplication of Two Square Matrices
09:25
Write a Python program to perform the multiplication of two square matrices. The program should take two matrices as input and output their product.
Input Format:
• The first line prints the "dimension: " and reads an integer n, representing the dimensions of the square matrices ($n \times n$).
• The second line prints: "first matrix:" and then reads n lines, each containing n integers separated by spaces, representing the rows of the first matrix.
• Next line prints: "second matrix:" and then reads n lines, each containing n integers separated by spaces, representing the rows of the second matrix.
Output Format:
• Print "Resultant Matrix:" followed by n lines, each containing n integers separated by spaces, representing the product of the two matrices.
