

### 3.1.1

#### **Problem Statement**

Write a Python program that prompts the user to enter three integers. Print the largest of the three integers.

#### **Algorithm**

- 1.Start.
- 2.Input three integers  $a$ ,  $b$ , and  $c$ .
- 3.If  $a \geq b$  and  $a \geq c$ , print  $a$  as the largest number.
- 4.Else if  $b \geq a$  and  $b \geq c$ , print  $b$  as the largest number.
- 5.Else, print  $c$  as the largest number.
- 6.Stop.

⌵

Write a Python program that prompts the user to enter three integers. Print the largest of the three integers.

**Input Format:**

- The program will prompt the user to enter three integers, one per line.

**Output Format:**

- The output will display the largest integer among the three integers.

Sample Test Cases +

largestNu...

Submit

Debugger

```

1 a = int(input())
2 b = int(input())
3 c = int(input())
4
5 largest = max(a,b,c)
6 print(largest)

```
